

Consent for Self-Administration of Medication

Name of Student

I prescribe the following prescription medication to the above student:	
_____ Name of Medication	_____ Dosage
_____ Reason for Rx	_____ Time of day
The student is authorized to self-administer and has been instructed in self-administration of this medication.	
Yes <input type="checkbox"/>	No <input type="checkbox"/>
_____ Signature of Physician or Nurse Practitioner	_____ Date
_____ Type or Print Name of Physician or Nurse Practitioner	
_____ Phone Number of Physician or Nurse Practitioner	

(This same form should be used for self-administration of non-prescription medication.)

I have read and understand the attached Administration of Medications During the Youth Programs information sheet. My child is authorized to self-administer and has been instructed in self-administration of this medication. The Johnson County Community College and its employees and agents shall not be liable for any injuries resulting from the student's self-administration of this medication.

Signature of Parent or Guardian of Student

Date

Emergency Contact Information

RETURN Form along with the Emergency Notification Form to JCCC CE Registration Office by Faxing: (913-469-4414) or mailing (Box 62, 12345 College Blvd, Overland Park, KS 66210). You may also bring with you on the first day of class.

ADMINISTRATION OF MEDICATIONS DURING THE YOUTH PROGRAMS

The parents/guardians of minor Youth Program students are responsible for informing JCCC of any medical conditions that require the students to self-administer medication or that may require emergency administration of medication during the program.

Medications for students should be given at home whenever possible. Even medications requiring doses three (3) times a day can generally be administered while the student is at home (prior to the start of the program, after the program and at bedtime). When students require medication(s), the Youth Programs must obtain a consent from the parent and physician to ensure that the student receives the correct medication and dosage at the proper time. In the event that a medication needs to be given to the student while at the Youth Program the following is required in order to do so:

- **Prescription medication** must be sent in the currently labeled prescription bottle with the student's name, medication name, dosage, dosage intervals, name of prescription and date it was filled, and be accompanied by a WRITTEN ORDER from the physician. Insulin will be treated as a prescription medication even though some forms may be obtained over the counter. Physician's order for medication must be reviewed and updated each year and all changes in dosage require a new written order.
- **Non-prescription medication** from home must be in the original packaging, clearly showing the dosage by age, the ingredients and the expiration date. A WRITTEN ORDER with specific instructions from a parent/guardian must accompany the medication. Students may bring non-prescription medications to school and self-administer those medications pursuant to the manufacturer's instructions for such medication only with a written authorization and consent from a parent. If necessary, students may retain possession and self-administer certain medications needed for asthma or allergies (inhaler, EpiPen) if approved in writing by the parent/guardian and the student's physician. Non-prescription medication, including over the counter medication (i.e. Tylenol, Advil) or generic equivalents will not be administered by any JCCC employee absent an emergency.
- **Controlled substances**, such as those medications used to treat ADD, ADHD or psychiatric behavioral disorders, should be given to the student by the parent/guardian.
- In the case of a previously identified allergy or any other known medical condition that interferes with participation in the Youth Programs, or requires administration of medication by a JCCC employee, the parent/guardian may be required to provide additional written authorization and execute a release of liability. Otherwise, the student may be denied participation in the Youth Programs.

Use of Subcutaneous Epinephrine for the Treatment of Potential Anaphylaxis

Use of epinephrine requires an immediate call to 911 and notification of the parent/guardian. For students with a known life-threatening allergy, parents need to supply the EpiPen(s).
