**WHAT IS APA?**
The American Psychological Association is an organization that supports educators and researchers, specifically in the discipline of psychology. Part of APA’s work includes creating and maintaining a standardized method in which writers can site their sources.
Citing sources in a written work is one of the most important components of completing a written assignment. In citing sources, you:
1. Give proper credit to the author(s) whose original ideas you are using in your paper
2. Point the reader back to the original source, if they wish to conduct their own research
3. Engage in scholarly and academic debate, using the work of others to support your argument
4. Avoid plagiarism

GENERAL FORMATTING GUIDELINES
- Page numbers are indicated in the top right-hand corner of each page, beginning with the Title Page
- All pages have a one-inch margin
- Double-space the entire document, including quotations and the References page
- Use a readable typeface and keep the size and font consistent throughout the paper; acceptable fonts include:
  - sans serif fonts such as 11-point Calibri, 11-point Arial, or 10-point Lucida Sans Unicode
  - serif fonts such as 12-point Times New Roman or 11-point Georgia
- Indent each paragraph .5 inches; the Tab key is usually defaulted to do this
- Headings should be included as identifiers of the sections within your paper; generally, headings are centered and bolded, with the text of the new paragraph following on a new line
- Include one space after each sentence
- Use a hanging indent for each entry on the References page

ELEMENTS OF A PAPER IN APA STYLE
- Title Page
- Abstract (optional)
- Body of the work, including in-text and/or parenthetical citations and headings
- References Page
- Appendices (optional)
Certain elements, such as an abstract or appendices, may be a requirement of your paper—check with your instructor and assignment guidelines to determine if these elements are needed in your paper.

**TITLE PAGE REQUIREMENTS**
The first page of your paper is the Title Page and must contain the following information:

- A header, justified right, containing the page number
- All other elements are centered on the page and double-spaced
- The title of your paper 3 - 4 lines down from the top of the title page, bolded and separated by one double-spaced blank line between the paper title and author name
- Author name, aka your name
- The author affiliation, or the name of the academic department followed by the college name
- The course number and name
- Instructor name
- Assignment due date

*Figure 1: Sample Title Page in APA Format*
BEFORE WRITING YOUR PAPER

PLAGIARISM
Plagiarism is using someone else’s words or ideas without giving credit to the original source. Plagiarism is a serious violation of academic integrity and is against JCCC’s Student Code of Conduct. To avoid plagiarism, cite your sources; use in-text citations, quotations, paraphrasing, and/or summarizing to support your own original ideas.

Example: Original text from Michael Agar’s book, Language Shock:

Everyone uses the word language and everybody these days talks about culture. . . . “Languaculture” is a reminder, I hope, of the necessary connection between its two parts. . . .

The following sentence is plagiarism, because it uses Agar’s term “languaculture” without crediting him:

At the intersection of language and culture lies a concept that might be called “languaculture.”

The following sentence is not plagiarism, because it credits Agar:

At the intersection of language and culture lies a concept that Michael Agar has called “languaculture” (1996, p. 60).

There are other ways to plagiarize, such as:

- Self-plagiarizing, which is using your own ideas in something else you have produced, without citing that previous work
- Paraphrasing too closely to the original source without proper citation
- Summarizing the original source without proper citation

PARAPHRASING
Paraphrasing means putting a source’s ideas into your own words and creating new sentences, stating ideas in an original way. Cite anything you have paraphrased.

Example: Original text:

“Grief, when it comes, is nothing we expect it to be.” (Didion, 2007, p. 26).

Plagiarized paraphrase:

When grief comes, it is not what we expect it to be. (Didion. 2007, p. 26).
Correctly paraphrased version—not plagiarized:

Most, if not all, individuals are sideswiped by the expressions of grief; they have trouble anticipating what grief will feel like (Didion, 2007, p. 26).

SUMMARIZING
Summarizing is not paraphrasing. Paraphrasing restates a smaller passage of the reading in the author’s own words. Summarizing gives a broader view, providing the main points of a larger portion of the work. If you are summarizing from a source, you still need to cite the original source.

For additional information on avoiding plagiarism, visit JCCC’s guide on academic integrity.

WRITING YOUR PAPER

IN-TEXT CITATIONS
In-text citations are short markers in your paper that refer the reader to the full citation on the References page. Citations can be incorporated into your paper in two different formats: narrative or parenthetical citations. Typically, both forms of citations are found in collegiate-level writing.

- **Narrative citations** incorporate the author’s name within the sentence. The publication date and page number goes in parentheses at the end of the sentence. Do not repeat the author’s name in the parentheses.
- **Parenthetical citations** capture the author’s name, publication date, and the page number—or article title, organization name, or other necessary location marker—in parentheses at the end of the sentence in which the quote, paraphrase or summary occurs.
  - When citing a source with two authors, use an ampersand (&) between the author’s last names (Jones & Smith, 1991)
  - When citing a source with three or more authors, include the last name of the first author listed followed by “et al.” (Martin et al., 2020)
  - When page numbers are available and you are using a quote or an idea from a specific page, include a page number in your narrative or parenthetical citation
Examples:  CITATION IN PROSE: Naomi Baron broke new ground on the subject (2013, p. 197).

PARENTHEtical CITATION: At least one researcher has broken new ground on the subject (Baron, 2013, p. 197).

FULL CITATION ON THE REFERENCES PAGE:

If the author’s name is not available, use the first significant word of the title of the source.

Example:  The 1995 BBC film adaptation of *Pride and Prejudice*, which is perhaps the most faithful retelling, has been the catalyst for a renewed fascination with the novel and a surge in adaptations of Jane Austen’s pinnacle work. (By the Book, 2019)

DIRECT QUOTATIONS
Incorporating direct quotes into your paper conveys important points exactly as the author of the source intended and can strengthen the argument you are making in your paper.

When using source material that you want to quote exactly:
• Introduce and incorporate the quote as a grammatically correct sentence
• Quotes cannot stand alone in a paper—do not insert a direct quote without explaining how it pertains to your paper
• If you use more than one quote in a sentence, place the parenthetical citation as close to the relevant quote as possible
• Place all the words from the original source inside quotation marks
• Follow the quotation with a parenthetical citation
  o When citing information contained on one page, use a ‘p.’
  o When citing information from more than one page, use ‘pp.’, with a dash between numbers
  o If the pages are not continuous, use a comma between the page numbers
  o When quoting from a source that does not have page numbers, include a heading or section name, as an indicator to the reader where to find the quotation
Example: (Smith, 1998, Gunnery section); (Rossel, 2014, Introduction)

The full citation, including the author’s name and all necessary publication information, goes on the References page at the end of the paper.

Examples:

**QUOTATION AT THE END OF THE SENTENCE:**
Joseph Conrad writes of the company manager in *Heart of Darkness*, “He was obeyed, yet he inspired neither love nor fear, nor even respect” (1899, p. 87).

**QUOTATION DIVIDED BY YOUR OWN WORDS:**
“He was obeyed,” writes Joseph Conrad of the company manager in *Heart of Darkness*, “yet he inspired neither love nor fear, nor even respect” (1889, p. 87).

**MULTIPLE QUOTATIONS IN A SENTENCE:**
Canada’s literacy history has been described as “a fractured discourse” (Howells & Kröller, 2009, p. 2), an idea echoed by a Jewish Canadian novelist who writes in French and feels she occupies a position “neither fully within nor fully without” (Robin, 1989, p. 182).

**BLOCK QUOTES**
Quotations that run longer than 40 words become block quotes. Block quotes should be used sparingly—the point of writing a paper is for your voice and ideas to be articulated, rather than that of other authors. The quote should support your thesis; you then discuss it’s importance.

- Do not use quotation marks
- Introduce the block quote on a new line
- Indent the entire quote 1 inch or 12-16 spaces
- Double space the entire block quote
- Include the page number at the end of your block quote, outside of the ending punctuation
- Specify the source in the introduction phrase or sentence, which ends in a colon
- If the block quote appears in the middle of a paragraph, do not indent the next line of your writing
Example: At the conclusion of *Lord of the Flies*, Ralph, realizing the horror of his actions, is overcome by emotion, and:

sobs shook him. He gave himself up to them now for the first time on the island; great, shuddering spasms of grief that seemed to wrench his whole body. His voice rose under the black smoke before the burning wreckage of the island; and infected by that emotion, the other little boys began to shake and sob too. (1954, p. 186)

While horror captures the boy’s emotions, the imagery connotes . . .

COMMON KNOWLEDGE
Information is considered common knowledge if it can be found in many different places, if it is a noncontroversial fact, and if the average person knows the information without having to look it up. Common knowledge is dependent upon context and can vary between cultures and disciplines.

Examples: INFORMATION KNOWN BY MOST PEOPLE: The sky is blue, grass is green.

INFORMATION KNOWN BY A SPECIFIC CULTURAL GROUP: Someone born in America would know that there are 50 states in the U.S.

INFORMATION KNOWN BY SOMEONE IN A SPECIFIC DISCIPLINE: An English major would know Jane Austen wrote *Pride and Prejudice*. A Chemistry major would know an atom is made up of protons, electrons, and neutrons

Check with your instructor when working on an assignment to know what they consider to be common knowledge and whether or not it needs to be cited. When in doubt, it is always best practice to cite the information!

CHANGES TO A QUOTE: ELLIPSES, EMPHASIS, AND ERRORS
In order to enhance clarity, it is sometimes necessary to change a direct quote. When changing a direct quote, APA specifies the following:
• To indicate the omission of material from the original quote, use ellipses.
  o To indicate the omission of material within a sentence, use three spaced ellipsis points (...)
  o To indicate an omission between two sentences, use four spaced ellipsis points (...). The first point is the period at the end of the first sentence quoted, and the three spaced ellipsis points follow
• Do not use an ellipsis at the beginning or end of any quotation, unless it will help prevent misinterpretation
• To add material to a direct quotation, insert the addition in brackets
• To emphasize a word, use italics, followed by “[emphasis added]”
• To indicate an error in the quote, do not correct it. Leave it and add “[sic]” immediately after the error

THE REFERENCES PAGE
The References page is a list of all the sources you cited in your paper.

GENERAL GUIDELINES
• The References page is the last section of the paper
• It begins on a new page
• The word “References” is centered at the top of the page, bolded
• Pagination is continuous with your paper
• Alphabetize the sources by the author’s or editor’s last name, or the first key word, such as in the name of the article, book, or website
• Double-space all entries
• Introduce each reference with a hanging indent. In a hanging indent, the first line is flush left and subsequent lines are indented

DOI and URL
The digital object identifier (DOI) is a set of characters which is assigned to a specific online document to make it easier to find. The DOI is similar to a URL, but more reliable, because the DOI is assigned only to that particular original source. Unlike URLs, it never changes.
• If a publisher specifies a DOI, include it in the citation entry instead of the URL
• If the DOI is not preceded by http:// or https://, precede it with https://doi.org

Example: https://doi.org/10.1177/026988118806297

Note: DOIs and URLs can be complex. Shortened versions of either is acceptable.
• To create unique, short DOIs, go to: http://shortdoi.org/
• If using a shortened-URL service, make sure the link goes to the proper location

REFERENCE PAGE EXAMPLES

Each example below contains an in-text citation and a corresponding References page entry.

Notes:
• One significant difference between APA and other citation styles is that titles are written in sentence case. Even if the title of the original source has the proper nouns capitalized, only the first word of the title is capitalized in an APA Citation

Example: SOURCE TITLE:
Data and Experience Design: Negotiating Community-Oriented Digital Research with Service-Learning

APA CITATION:

• Check with your instructor to determine if they have preferences for citing sources that may differ from the examples below
• These examples are not exhaustive—for additional citation information, including examples of extraordinary citation situations, visit https://apastyle.apa.org/

## ONLINE SOURCES

**Note:** Include a “Retrieved” date for an online source only if:
- It does not have a publication date
- It appears to have been altered or removed since you first accessed it
- It is regularly updated (Breaking news, weather forecasts, stock market reports, etc.)

ANNOTATED BIBLIOGRAPHY

Your instructor may ask for an Annotated Bibliography during the writing process. While similar to a References page, an Annotated Bibliography serves as a tool for evaluating and/or describing sources. To create an annotated bibliography:

1. Set up a References page according to APA guidelines
2. Change the title of the document to “Annotated Bibliography” or “Annotated List of References”
3. Indent an inch from the start of each citation entry
4. Write a description of the source
5. Keep the description succinct—no longer than a paragraph

An annotated bibliography helps you remember what is contained within each source and gives your instructor an idea of the sources you intend to use in your paper.

Example: FULL CITATION ON THE “ANNOTATED BIBLIOGRAPHY” PAGE, THEN FOLLOWED BY A SHORT DESCRIPTION:

The book provides a comprehensive history of Australian print censorship and discusses its implications in regard to questions of transnationalism.
Metacognition and Learning Preferences in College Students

Alex Smith

English Department, Johnson County Community College

WCTR 100: Introduction to Writing

Dr. Moore

June 30, 2021
College students face any number of challenges in their adjustment to college life: choosing a major, finding a sense of belonging, social, emotional, and financial burdens, but perhaps the greatest challenge is adjusting to and meeting the rigorous standards of college academics. Many first-time college students believe the study habits they learned in high school or past educational experiences are good enough to get them through their college coursework; this is often not the case. According to an article about improving classroom performance:

Most entering students are not adequately prepared either academically or in terms of study skills for college level work. [They] arrive at college with highly overlearned study skills developed in high school that are now ineffective … One of the major challenges students face in the transition to college is changing their entrenched but counterproductive study skills … The transition to college is not just about learning new study strategies, but also about overcoming old ones. (Chew, 2010)

In order to overcome these “entrenched but counterproductive study skills” (Chew, 2010), students must first take ownership of their learning experiences through developing stronger metacognition skills. Once students acknowledge their active role in the learning process, they can then determine their learning preferences. When students have better metacognition and harness their learning preferences, they can begin to enter into the collegiate learning experience.

**Metacognition**

Before students can effectively succeed in college coursework, they need to develop proper metacognition. Metacognition “is being aware of our thinking as we perform specific tasks and then using this awareness to control what we are doing” (Packet #1, 2019). In other words, students need to understand how they learn (Chew, 2010). When students practice metacognition, they can more effectively evaluate their methods for learning, adapt them as
necessary, and perform better. Much of metacognition involves self-regulation, a quality which is often developed and strengthened during the time in which traditionally aged college students are working through their degrees. According to Education Endowment Foundation, “[m]etacognitive regulation is about planning how to undertake a task, working on it while monitoring the strategy to check progress, then evaluating the overall success” (EEF, 2021). Metacognition is like a bridge for students—if they can develop this skill, they are then primed to have a growth mindset, which is vital in succeeding in college courses. When students have conscious awareness of the study process, they can determine what tools and techniques work best for them, refine those skills, and harness them to their advantage (Tierney, 2021).

**Learning Preferences**

Students can practice metacognition and more fully enter into the study process through identifying their primary learning preference. There are four generally agreed upon learning preferences: visual, auditory, read/write, and kinesthetic, or collectively referred to through the acronym VARK. This inventory which was originally developed by Neil Fleming in 1987 helps students determine their learning preference through taking the VARK questionnaire (VARK Learn Limited, 2021). Originally described as “a communication questionnaire” (varklearn, 2011), VARK is designed to identify the modality through which individuals prefer to learn.

The VARK questionnaire identifies four main ways through which students prefer to present and process information (Boatman et al., 2008). Visual learners prefer intaking information through maps, graphs, charts, and diagrams; focusing on infographics in textbooks would be beneficial for this type of learner. Auditory learners need to hear or talk through information; lectures, listening to the audio version of a textbook, talking through concepts with someone else are all tools for auditory learners. Those who learn best by reading information and
then regurgitating it through written word fall within the read/write category. Finally, kinesthetic learners are considered hands on learners—they need to experience something or have it related through real-life circumstances in order to comprehend the information. Case studies, practical experiences, and demonstrations are all ways in which kinesthetic learners best retain material. While the VARK questionnaire may indicate a student has a stronger preference towards one learning style, it is likely that most students are multimodal, meaning that a combination of two preferences more accurately represents the ways in which students learn (VARK Learn Limited, 2021).

Once students identify their learning preferences, they can adapt both their study habits and even their potential degree track to best compliment the ways in which they most effectively learn. Take for instance four students in a biology class, learning about mitosis and meiosis. A visual learner would best learn these concepts through drawing out the different phases of each cycle, whereas an auditory learner would need to listen to lecture or perhaps a podcast and then explain the concepts to a friend. A student with a read/write preference would need to read the textbook and write out key phases and definitions. Finally, a kinesthetic learner would need real-life examples of mitosis and meiosis happening in nature. Employing learning preferences expands beyond learning a single concept. For example, auditory learners can choose classes with lecture and discussion components and kinesthetic learners can take classes with labs or practical experiences (VARK Learn Limited, 2021). Similarly, students can choose majors and career paths that will allow them to harness their learning styles to their advantage. When students “work to understand their individual learning preferences” they will “become more efficient learners” (Sills et al., 2009) and can thereby transform their collegiate experience.
Learning References Research

Research has been conducted in a variety of disciplines to determine the efficacy of learning preferences. During the 2005/2006 academic year at Saint Mary’s College of California, researchers focused on introductory economic courses and sought out to answer the question of “[d]oes learning style preference significantly impact student performance in introductory economics courses and, if so, how?” (Boatman et al., 2008). The research showed that students with visual learning preferences tended to perform better in the economics course, which largely relies on graphs and tables to convey information. The study also suggested that teaching strategies can be adapted to better involve kinesthetic and auditory learners (Boatman et al., 2008). Other studies have been conducted, many with nursing and medical students, to assess students’ learning preferences and suggesting adjustments in teaching strategies to accommodate different learners.

Though learning preferences are disputed by some researchers, evidence does show that individuals find the information useful. Between May and August 2020, 237,537 people took the VARK Questionnaire. Of that group, 34% of respondents had single preferences, with the majority showing a preference for kinesthetic, and 66% of respondents were multimodal learners. Of the 237,537 respondents, 29,082 filled out additional research questions. From this data, it was determined that there was a higher preference among individuals, despite gender or age, towards a kinesthetic learning preference. Additionally, 74% of respondents agreed that the learning preference they were assigned matched their perceptions of how they best learn (VARK Learn Limited, 2021). This data is a clear indication that individuals find the VARK model a useful tool for how they best learn.
If students develop metacognition and apply it to tasks like determining their learning preference, they are well on their way to becoming more effective learners. However, these two traits alone are not enough to provide true change:

Knowing one’s VARK preference for learning is not enough to change study behaviors. Each learner has to make their own changes and that requires effort, recognition and metacognition. If those are not present the learner will remain with his/her strategies unchanged and that may mean no change in academic success or the same levels of success as previously. (VARK Learn Limited, 2021)

Metacognition and learning preferences are only the beginning of the learning process. Students must take these tools and use them to establish a growth mindset, develop study techniques that are beneficial to them and their coursework, maintain motivation, create useful time and stress management techniques, and refine executive functioning skills. If students harness these tools of metacognition and learning preferences appropriately and actively participate in their learning journey, they are sure to find success in college coursework.
