

This document applies to student VPN access from an on or off campus computer.

Supported VPN Desktop operating systems / Web Browsers		
OS / Browser	Chrome	Internet Explorer * <i>Internet Explorer recommended</i>
Windows 8.1	37, 38, 39	IE-11
Windows 8	37, 38, 39	IE-10
Windows 7	37, 38, 39	IE-11, IE-10, IE-9
Windows 10	37, 38, 39	IE-11,

For more information, please visit the Technical Support Center webpage:
<http://www.jccc.edu/student-resources/technical-support/index.html>

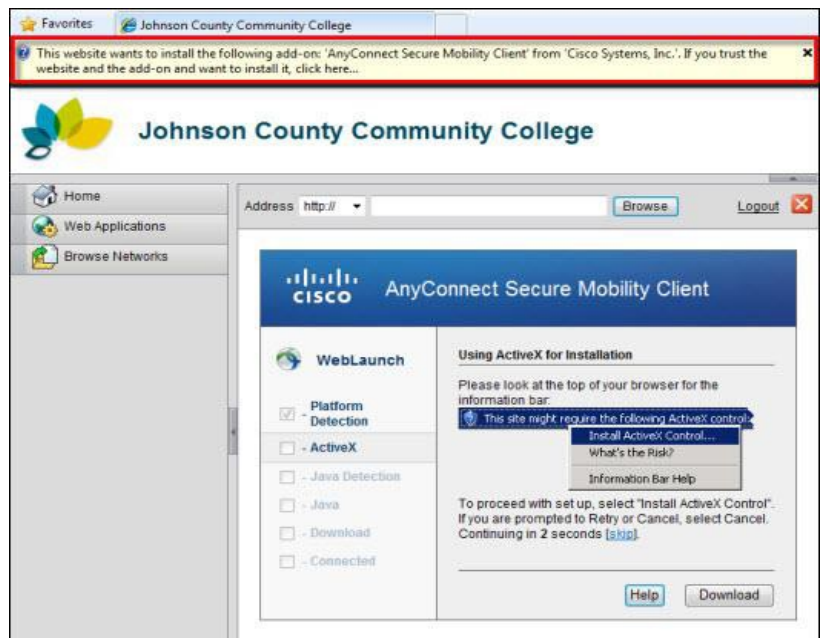

- 1) On your **home** computer, open a web browser, and go to
<https://studentvpn.jccc.edu>

Enter your username and password, and select **Logon**.

- 2) The website will attempt to automatically install the Cisco AnyConnect Secure Mobility Client onto your computer.

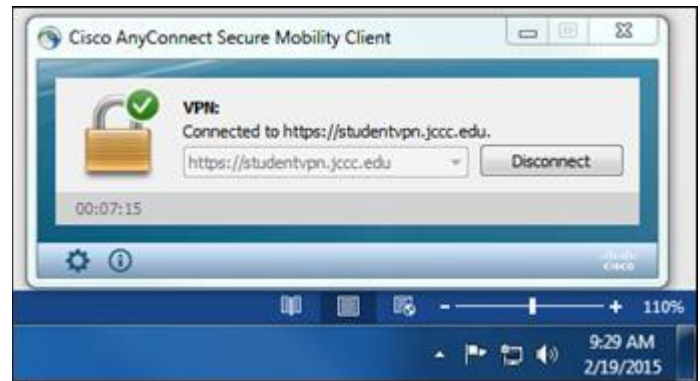

If you are using Internet Explorer, you may see a yellow warning bar at the top of the webpage. Click the yellow area to continue with the installation.

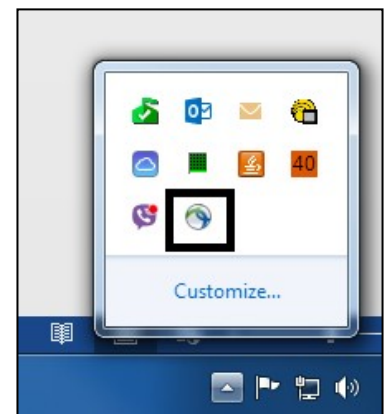

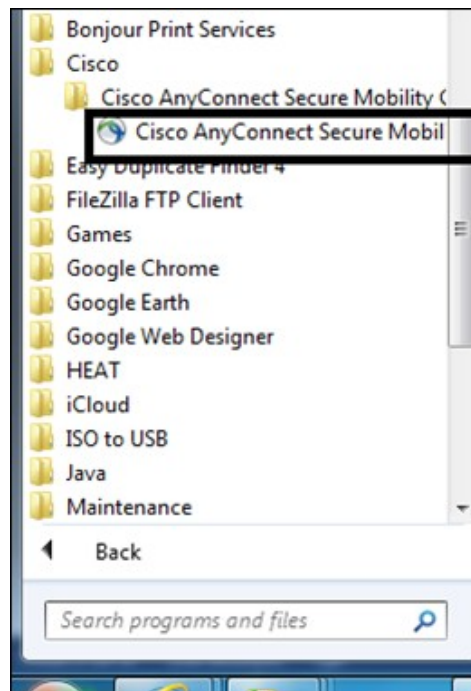

- 3) Depending on your home computer setup, you may be prompted with additional windows. Select Run or Install to continue.

- 4) After installation, Cisco AnyConnect will run automatically. If it does not, please type into the address "http://studentvpn.jccc.edu" into the text field and click "Connect".

- 5) The VPN client can be launched again by going to **Start > All Programs > Cisco** or from the icon system tray.

How to access the VMware client on Windows

Revision 8-21-2018

Note: If you are off campus, you will need to be connected to the VPN to access the VMWare client. On campus computers do not require the VPN.

1. After you have connected to the client, open up Internet Explorer. This is the recommended browser for this client. Go to the following URL address:

<https://it.jccc.edu>

2. You can use either the flash based web client, or the HTML5 based web client. To use the flash based web client, click “vSphere Web Client (Flash)”

Getting Started

To access vSphere, log in to:

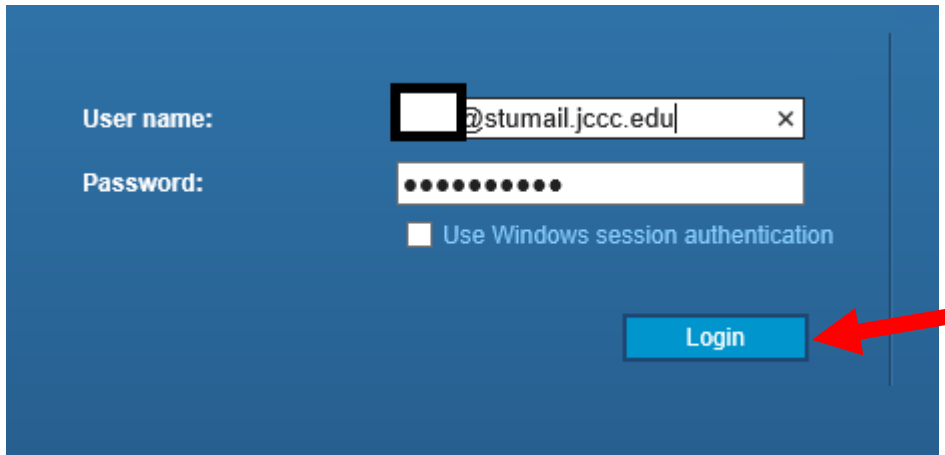

- [vSphere Web Client \(Flash\)](#)
- [vSphere Client \(HTML5\) - partial functionality](#)

For help, see:

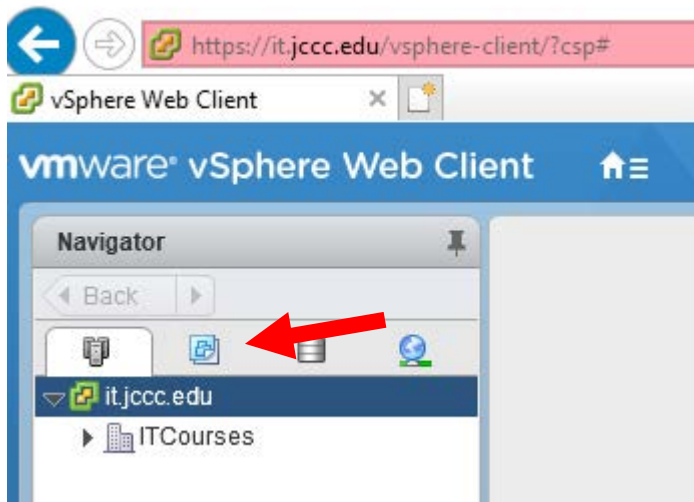

- [vSphere Documentation](#)
- [Supported Functionality in vSphere Client \(HTML5\)](#)

vCenter Servers

3. Login with your JCCC stumail account (this is the email account that uses your username@stumail.jccc.edu).

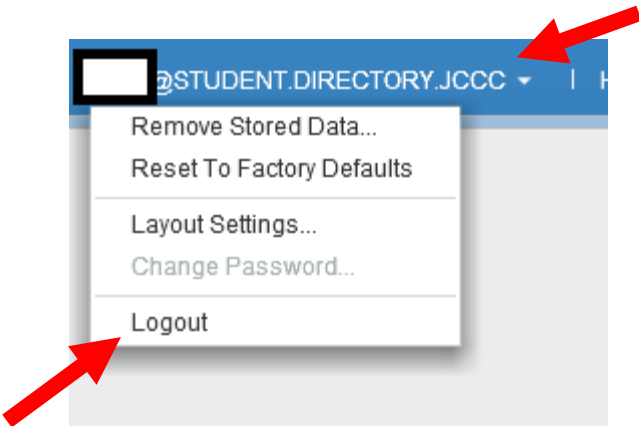

4. You should now have access to any VMs assigned to you for your course. Click the blue pages icon to view your VM and Templates.

5. If you want to use the HTML5 based client instead, click “Launch vSphere Client (HTML5)” to do so.

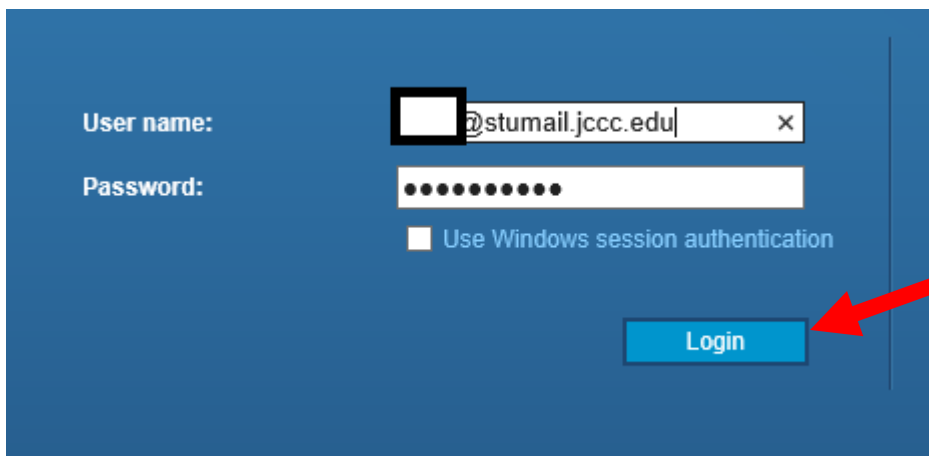

6. To log out, click the dropdown that has your username displayed to log out. Click “Logout”

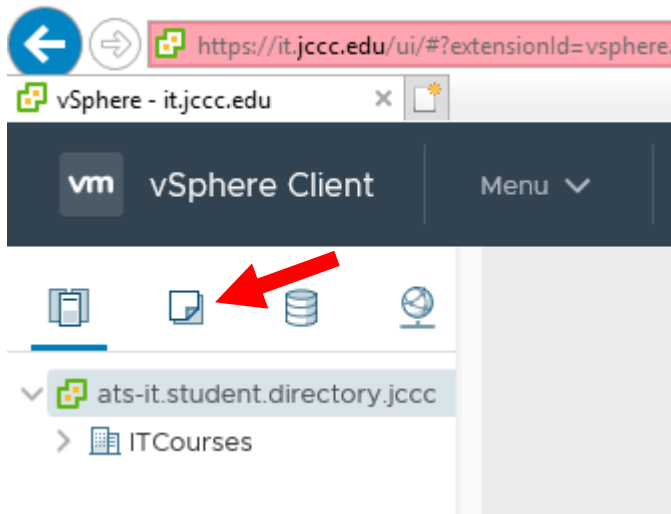

7. To access the HTML5 based client from the front page, click “vSphere Client (HTML5) – partial functionality”.

8. Login with your JCCC stumail account (this is the email account that uses your username@stumail.jccc.edu).

9. You should now have access to any VMs assigned to you for your course. Click the icon of the pages to view your VMs and Templates.

10. Click the dropdown that has your username displayed to log out. Click "Logout"
